Attempt : 1
Total Mark : 10
Marks Obtained : 10

Section 1 : COD

1. Problem Statement

In a ticket reservation system, you store the available seat numbers in a TreeSet. Users input their desired seat number, and the program checks whether the chosen seat is available.

Using a TreeSet ensures quick and efficient verification of seat availability, ensuring a smooth and organized ticket booking process.

Input Format

The first line of input contains a single integer n , representing the number of available seats.

The second line contains n space-separated integers, representing the available seat numbers.

The third line contains an integer m, representing the seat number that needs to be searched.

Output Format

The output displays "[m] is present!" if the given seat is available. Otherwise, it displays "[m] is not present!"

Refer to the sample output for the formatting specifications.

Sample Test Case

Input: 4

2 4 5 6

5

Output: 5 is present!

Answer

// You are using Java

import java.util.*;

```
public class Main{
    public static void main(String[] args){
        Scanner sc = new Scanner(System.in);
        Set<Integer> seats = new TreeSet<>();
        int n = sc.nextInt();
        for(int i=0; i<n; i++){
            seats.add(sc.nextInt());
        }
        int checkSeat = sc.nextInt();
        if(seats.contains(checkSeat)){
            System.out.println(checkSeat+" is present!");
        }else{
            System.out.println(checkSeat+" is not present!");
        }

        sc.close();
    }
}
```

Status : Correct
